Software Engineer

We are looking for a Software Engineer to join our growing team of highly skilled engineers working on a variety of applications and services to support our omni-channel, proactive communication platform. You will be working in multidisciplinary team with other professionals delivering high quality and secure software within an Agile delivery framework.

We offer a friendly and flexible working environment that is currently 100% remote with occasional team meetups when possible.

Key Responsibilities

- Write, test, maintain code which adheres to internal guidelines and industry best practices.
- Take part in code reviews (as reviewer and reviewee).
- Write reusable code and libraries.
- Participate and contribute in team Scrum ceremonies.
- Ensure applications are built to modern security standards.

Knowledge/Experience

Required:

- Strong analytical and problem solving skills.
- Strong Microsoft C# experience, with experience in OOP and applying modern design patterns.
- Experience designing and building web-based products using the Microsoft ASP.NET or .NET Core frameworks and associated technologies.
- Strong relational database experience and proficient in writing and troubleshooting SQL (preferably MySQL).
- Ability to write testable, reusable and scalable code to help with the rapid development of the company.
- Containerisation and microservice development - Docker, Kubernetes.
- Proficient working with Git and other development process tooling.
- Experience working with CI/CD tooling - Azure DevOps/Team City/Octopus Deploy.

Desired:

- Experience working with SaaS.
- Knowledge of AWS, Azure and/or other cloud technologies.
- Working with Agile teams.
